

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

1713

In re application of:
Paul EUSTACE et al.

Appl. No. 10/049,604

Confirmation No. 9719

Filed: May 8, 2002

For: MELT-PROCESSABLE
THERMOPLASTIC
COMPOSITIONS

Art Unit: 1713

Examiner: Unassigned

Atty. Docket No. 31229-178457

Customer No.

26694

PATENT TRADEMARK OFFICE

INFORMATION DISCLOSURE STATEMENT

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Applicants present herewith copies of the references cited on the enclosed 1449 form [2 pages] for the Examiner's review and citation during the prosecution of the above-identified application.

The following European references are enumerated on the 1449: English language abstracts for the following were obtained from Dialogue and are attached:

EP 0,522,351B,

EP 0,216,139B,

EP 0,277,874B,

EP 0,279,724B,

EP 0,528,196B,

EP 0,570,782B

EP 0,491,266A

Also attached hereto are translations of claim 1 of each of the following references [which are cited on the 1449 form];

WO 00/78663

DE 19844716

DE 19844657

DE 19725984

DE 4232501

the translations were provided by the applicants' British Representatives and appear in APPENDIX A.

No English language counterpart of Canadian Patent application 2194092A, which is cited on the 1449 form, was locatable; accordingly an English Language Abstract of the French case corresponding counterpart of Canadian Patent application 2194092A is enclosed.

The requisite fee is enclosed. If a greater or lesser fee is required, please charge or credit Deposit Account No. 22-0261 accordingly and notify the undersigned.

Claims---APPENDIX A

WO 00/78663

1. Modified impact-resistant polymethacrylate moulding material characterized by
 - a Vicat softening temperature according to ISO 306 (B 50) of at least 90°C,
 - a notched bar impact strength KSZ (Charpy) according to ISO 179/1eA of at least 3.0 kJ/m² at 23°C,
 - and
 - a flowability MVR (230°C/3.8 kg) according to ISO 1133 of at least 11 cm³/10 min,which can be obtained by mixing
 - a) 80 to 98 %wt of a modified impact-resistant polymethacrylate moulding material with
 - b) 20 to 2 %wt of a low molecular polymethacrylate moulding materialin a molten state, wherein the impact resistant moulding material is 70 to 99 %wt composed of a matrix consisting of 80 to 100 %wt of radically polymerized methyl

methacrylate units and optionally 0 to 20 %wt of other radically polymerizable comonomers, and contains 1 to 30 %wt of an impact resistance modifying agent, and the low molecular polymethacrylate moulding material is 80 to 100 %wt composed of radically polymerized methyl methacrylate units and 0 to 20 %wt of other radically polymerizable comonomers, and has a viscosity number (η_{sp}/c) of 25 to 35 ml/g when measured in chloroform in accordance with ISO 1628 Part 6.

DE 19844716

1. A laminated extruded synthetic resin sheet comprising a methyl methacrylate resin, obtainable by laminating resin layers (B) on both surfaces of a resin layer (A) by a multilayer extrusion process, the resin layer (A) being obtainable by uniform dispersion of 0 to 50 parts by weight of a rubber-like polymer in 100 parts by weight of a methyl methacrylate resin, and the resin layer (B) being obtainable by uniform dispersion of 1 to 50 parts by weight of insoluble methyl methacrylate resin particles with a weight average of particle size of 1 to 100 μm in 100 parts by weight of a base resin comprising 100 parts by weight of a methyl methacrylate resin and 0 to 70 parts by weight of a rubber-like polymer.

DE 19844657

1. Light-diffusing laminated synthetic resin sheet obtainable by laminating a resin layer (B) on at least one surface of a resin layer (A), the resin layer (A) being obtainable by uniform dispersion of 0.1 to 10 parts by weight of a light-diffusing agent with a weight average of particle size of 1 to 10 μm in 100 parts by weight of a base resin comprising 100 parts by weight of a methyl methacrylate resin or styrene resin and 0 to 30 parts by weight of a rubber-like polymer, and the resin layer (e) being obtainable by uniform dispersion of 3 to 70 parts by weight of a rubber-like polymer in 100 parts by weight of a methyl methacrylate resin or styrene resin, essentially without dispersion of inorganic particles.

DE 19725984

1. Process for the production of acrylic surfaces with high abrasion and scratch resistance, characterized in that a gel coat (12) containing a specific concentration of homogeneously dispersed nano-scale particles is first applied to one part of a mould (11, 12) used for the production of an acrylic sheet, and the mould is then filled with liquid prepolymer for production of the acrylic sheet, which is then cured to give an acrylic sheet formed from the prepolymer with a coating formed from the gel-coat layer.

DE 4232501

1. Composite in the form of a dispersion composite with at least one dispersed phase and a matrix phase receiving the dispersed phase, characterized in that the dispersed phase consists of cured thermosetting plastics in the form of preferably particulate inclusions, and in that the preferably polymeric matrix phase wets the dispersed phase well and adheres to it well in the solid state so that the dispersed phase is bonded by the matrix phase.

WO 00/78663

1. Modified impact-resistant polymethacrylate moulding material characterized by
a Vicat softening temperature according to ISO 306 (B 50) of at least 90°C,
a notched bar impact strength KSZ (Charpy) according to ISO 179/1eA of at least 3.0 kJ/m² at 23°C,
and
a flowability MVR (230°C/3.8 kg) according to ISO 1133 of at least 11 cm³/10 min,
which can be obtained by mixing
a) 80 to 98 %wt of a modified impact-resistant polymethacrylate moulding material
with
b) 20 to 2 %wt of a low molecular polymethacrylate moulding material

in a molten state, wherein the impact resistant moulding material is 70 to 99 %wt composed of a matrix consisting of 80 to 100 %wt of radically polymerized methyl methacrylate units and optionally 0 to 20 %wt of other radically polymerizable comonomers, and contains 1 to 30 %wt of an impact resistance modifying agent, and the low molecular polymethacrylate moulding material is 80 to 100 %wt composed of radically polymerized methyl methacrylate units and 0 to 20 %wt of other radically polymerizable comonomers, and has a viscosity number (η_{sp}/c) of 25 to 35 ml/g when measured in chloroform in accordance with ISO 1628 Part 6.

DE 19844716

1. A laminated extruded synthetic resin sheet comprising a methyl methacrylate resin, obtainable by laminating resin layers (B) on both surfaces of a resin layer (A) by a multilayer extrusion process, the resin layer (A) being obtainable by uniform dispersion of 0 to 50 parts by weight of a rubber-like polymer in 100 parts by weight of a methyl methacrylate resin, and the resin layer (B) being obtainable by uniform dispersion of 1 to 50 parts by weight of insoluble methyl methacrylate resin particles with a weight average of particle size of 1 to 100 μ m in 100 parts by weight of a base resin comprising 100 parts by weight of a methyl methacrylate resin and 0 to 70 parts by weight of a rubber-like polymer.

DE 19844657

1. Light-diffusing laminated synthetic resin sheet obtainable by laminating a resin layer (B) on at least one surface of a resin layer (A), the resin layer (A) being obtainable by uniform dispersion of 0.1 to 10 parts by weight of a light-diffusing agent with a weight average of particle size of 1 to 10 μ m in 100 parts by weight of a base resin comprising 100 parts by weight of a methyl methacrylate resin or styrene resin and 0 to 30 parts by weight of a rubber-like polymer, and the resin layer (e) being obtainable by uniform dispersion of 3 to 70 parts by weight of a rubber-like polymer in 100 parts by weight of a methyl methacrylate resin or styrene resin, essentially without dispersion of inorganic particles.

DE 19725984

1. Process for the production of acrylic surfaces with high abrasion and scratch resistance, characterized in that a gel coat (12) containing a specific concentration of homogeneously dispersed nano-scale particles is first applied to one part of a mould (11, 12) used for the production of an acrylic sheet, and the mould is then filled with liquid prepolymer for production of the acrylic sheet, which is then cured to give an acrylic sheet formed from the prepolymer with a coating formed from the gel-coat layer.

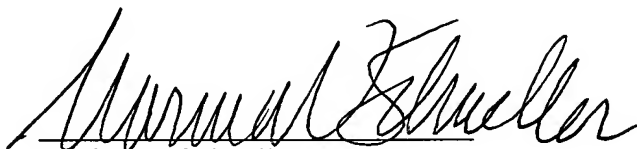

DE 4232501

1. Composite in the form of a dispersion composite with at least one dispersed phase and a matrix phase receiving the dispersed phase, characterized in that the dispersed phase consists of cured thermosetting plastics in the form of preferably particulate inclusions, and in that the preferably polymeric matrix phase wets the dispersed phase well and adheres to it well in the solid state so that the dispersed phase is bonded by the matrix phase.
